Subject landfill, not needed

Mrs Ruston,

My name is Carl Woodside, I know that im just another person on your list of people to deal with, what i would like to say will be short, i grew up in the areas surrounding this proposed landfill site. The reactivation of the railroads in this area is ubsrud, the land is just coming back to the close to original state that it was before people, the land all around this area was all mines in the late 1800s, the land was stripped of all the coal, they got all they could then they just threw it all back together, the waters around this area some are pristine trout streams, fresh water springs around the black moshannon state park. Once u get outside of the state park boundaries the water runs red with sulfur, this is due to stripping minerals from the ground and then leaving the earth to fix it, there are ways to fix this, but as always no one really cares about anything unless it involves making profits!! Now this proposed landfill biggest of the east coast will sit in between two very nice streams. One is beautiful, filled with trout this stream is the one that flows from black moshannon lake. Now the other is the moshannon creek which is sulfur, in the earlyier days this creek(red moshannon) was a pristine native trout stream like alot of the waters in pa before the coal companies did their damage. This proposed landfill will be situated in between these two forms of running water, as you probabaly already know landfill liners leak, the waters in this area have already been exploited enough, there is ways to treat acid runoff and acidic water, they are already trying it in clearfied county pa and other places. Both of these streams then flow to the east branch of the susquehanna river, to form the main part of the susquehanna. Then as you know on to the bay which as we both know has been very important and are trying also to restore to its original state, this wont happen if you dont stop what goes into the bay!! Well i guess the main thing ill say is this land has sat idle for how long the people have adapted to having nothing and making something from nothing. You and others may think this land is nothing but when u have nothing u take the more simple things and make something out of it. All of a sudden these people from lancaster(recource recoveries llc) can put garbage into the land and ruin it once more, I would not like to see this and i dont even live there anymore im sure the others from there dont want it either, please reconsider permit for rj corman rr co shut it down please and thiank you for your time hope this finds u well
